Data Definition Wizard

Welcome to the Data Definition Wizard

X

Cancel

Help

The Wizard will define your data so you can analyze it. At each step, when the screen appears, you will see the Wizard's advice as indicated by a radio button or other control. You can override any of the Wizard's recommendations. If you need to go back several screens, the Wizard will remember your choices when you go forward again, unless you make a change.

The next page will show the steps required to define a file.

Do not show this welcome screen again

MySQL Installer

MySQL. Installer

High Availability

Standalone MySQL Server / Classic MySQL Replication

Choose this option to run the MySQL instance as a standalone database server with the opportunity to configure classic replication later. With this option, you can provide your own high-availability solution, if required.

InnoDB Cluster

The InnoDB cluster technology provides an out-of-the-box high availability (HA) solution for MySQL using Group Replication.

Note: InnoDB cluster requires a minimum of three MySQL server instances to provide a fully automated HA solution. Members of a cluster should be located such that network communication latency between servers is low.

MySQL Installer

MySQL Server 8.0.19

High Availability

Type and Networking

Authentication Method

Accounts and Roles

Windows Service

Apply Configuration

Authentication Method

Use Strong Password Encryption for Authentication (RECOMMENDED)

MySQL 8 supports a new authentication based on improved stronger SHA256-based password methods. It is recommended that all new MySQL Server installations use this method going forward.

Attention: This new authentication plugin on the server side requires new versions of connectors and clients which add support for this new 8.0 default authentication (caching_sha2_password authentication).

Currently MySQL 8.0 Connectors and community drivers which use libmysqlclient 8.0 support this new method. If clients and applications cannot be updated to support this new authentication method, the MySQL 8.0 Server can be configured to use the legacy MySQL Authentication Method below.

O Use Legacy Authentication Method (Retain MySQL 5.x Compatibility)

Using the old MySQL 5.x legacy authentication method should only be considered in the following cases:

- If applications cannot be updated to use MySQL 8 enabled Connectors and drivers.
- For cases where re-compilation of an existing application is not feasible.
- An updated, language specific connector or driver is not yet available.

Security Guidance: When possible, we highly recommend taking needed steps towards upgrading your applications, libraries, and database servers to the new stronger authentication. This new method will significantly improve your security.

Help

The Wizard will define your data so you can analyze it. At each step, when the screen appears, you will see the Wizard's advice as indicated by a radio button or other control. You can override any of the Wizard's recommendations. If you need to go back several screens, the Wizard will remember your choices when you go forward again, unless you make a change.

The next page will show the steps required to define a file.

Do not show this welcome screen again

ข้อจำกัดของ MySQL

การเรียกคืนก้อนข้อมูลสหกรณ์ของโปรแกรม Isocare ที่ใช้ ฐานข้อมูล MySQL จะต้องใช้ MySQL Server8.0 ซึ่งเครื่องที่ ผู้สอบบัญชีใช้งานจะติดตั้ง MySQL ซึ่งถูกติดตั้งพร้อม กับ AppServ เวอร์ชัน 2.5.9 ของโปรแกรมระบบบัญชี สหกรณ์ที่พัฒนาโดยกรมตรวจบัญชีสหกรณ์ เมื่อติดตั้ง MySQL Server8.0 แล้วจะส่งผลกระทบการทำงานของ โปรแกรมระบบบัญชีสหกรณ์ได้

Thank You !

กลุ่มพัฒนาระบบตรวจสอบบัญชีคอมพิวเตอร์
